

TASK1 branch creation

creating branch include readme

Step1 :git (checkout development)we need first to be on correct branch before we create new one

Step2: (git pull origin development)to make sure that local branch have most up to date code so that we not loss it

Step3: (git checkout -b feature/feature name) creating and switing to new branch

Step4:(echo"#EmployeeManagmentSystem">Readme.md)

Step5: (git add readme.md) adding readme to github

Step6: git status checking what we have
